

THE ULTIMATE GUIDE TO DATA GOVERNANCE AND RISK MANAGEMENT

The "Global Datasphere" in 2018 reached 33 ZETTABYTES

of C-level executives believe that data is an integral part of forming their business strategy.

of organisations maintain high-quality data to increase efficiency and improve cost savings.

of C-level executives believe the responsibility for data quality should ultimately lie within the business with occasional help from IT.

PAIN POINTS OF DATA MANAGEMENT

Lack of agility

Lack of awareness of any possible risks

Failure to leverage digital transformation

Failure to implement a flexible infrastructure to accommodate big data management

Data Risk Management Can Address These Pain Points.

THE BENEFITS OF IMPLEMENTING RISK MANAGEMENT IN DATA PROTECTION

Increased cyber resilience

All identified risks can be stored centrally

Decision making is improved with better quality data

Budgets will rely less on guesswork

Departments can forecast both financial and resource requirements

Improved and enhanced communication

Risks and issues can be captured individually

Adherence to the risk management model of identify, analyse, control, monitor and action

The focus of teams and departments is improved

BUSINESS ADVANTAGES OF AUTOMATING YOUR RISK REGISTER WITH VERITAS ENTERPRISE VAULT:
