ENVISION MODERN IDENTITY MANAGEMENT

With many organisations adopting for a flexible "work from anywhere" approach, a shift in how organisations view their data security and protection is required. It is no longer good enough to just employ traditional firewalling techniques.

Cyber criminals are increasingly targeting user identities through sophisticated social engineering methods to better orchestrate attacks. Organisations therefore need to adapt their approach to securing identities by adopting advanced conditional access techniques.

Modern identity management is as much about delivering a flexible, scalable and easy to consume single sign-on platform as it is about ensuring security. bluesource's modern identity management offering – powered by Microsoft Azure Active Directory – helps organisations deliver secure productivity by focusing on protecting and governing the identity control plane.

THE TYPICAL CHALLENGES WE HELP SOLVE

√ Organisations are having to support an ever-growing portfolio of software as a service (SaaS) applications and need to standardise the provisioning and management approach

√ Users are finding managing multiple logins to different SaaS apps difficult and inevitably re-use passwords which increases the attack surface and risk profile

√ Organisations are wanting to deliver secure single sign-on solutions

√ The traditional approach to single sign-on using Active Directory Federation Services requires managing an estate of 4 to 8 server instances, which is time, space and resource consuming

THE BLUESOURCE APPROACH

A bluesource identity management consultant will conduct workshops to showcase the capabilities of the Microsoft conditional access offering, understand the organisation's current approach to single sign on and identity management and agree the design decision points for the pilot implementation.

Envision the art of the possible

Assess the current ways of working

Design the pilot phase approach

Deliver the pilot solution

The output of the workshops will be a modern identity management strategy report detailing the findings, recommendations and agreed decision points leading to a pilot implementation of Azure Active Directory conditional access.

BENEFITS

√ Envision and enable a secure, flexible and scalable identity management platform that can support almost any cloud-based SaaS app as well as on-premises web-based applications

√ Users need only manage one identity and multi-factor token to access all business applications

√ Access to business applications and data can be based on any mix of application, geo-location, device and identity risk factor

√ Our subscription-based licensing options through Azure Active Directory Premium, Enterprise Mobility & Security or Microsoft 365 Enterprise offer true flexibility

GET IN TOUCH

We help organisations protect, govern, move & manage their data.
